

Stainless steel gas/steam filter housings.

Donaldson® P-EG filter housings are designed for purification of compressed air, technical gases and steam. They are equipped with NPT thread or flange connections depending on size and have an electro-polished or bead-blast surface finish. P-EG filter housings are designed to yield low differential pressure at high flow rates.

P-EG filter housings are available in 18 different sizes with a capacity range from 35 to 12,700 scfm at 100 psig. Optional connections are also available to adapt the filter to your specific requirements. Standard housings utilize Donaldson filter elements with 2-inch, double O-Ring, plug-in connections.

A broad selection of filter elements is available to meet the compatibility and micron rating requirements of your process.
