

# TurnPro™

## INNER-OUTER REAMING AND DEBURRING TOOL

The TurnPro TDT Inner-Outer Reaming and Deburring tool provides a fast one-step method for preparing tube ends prior to tube fitting installation. Deburring can help ensure that tubing seats properly into the tube fitting. It also can remove burrs from the inside edge of the tube to prevent them from obstructing the flow path or entering the system.

Part Number	Description
TP-TDT-24	Tube Deburring Tool, 3/16" to 1-1/2" and 4mm to 38mm OD
