

Manifolds and Accessories

Flow Manifolds
Static Pressure Manifolds
Liquid Level Manifolds

Anderson Greenwood is the industry leader in instrument valve technology and the original innovator of the 3-valve manifold. Our capabilities include over 50 years of research, design and manufacture of instrumentation products. Our products are designed to be maintenance free, and are offered with numerous configurations, materials, end connections and special requirements.

Bonnet Technology

Soft-Seated Bonnet Assembly

The soft-seated bonnet assembly has a one-piece rotating stem and plug. The stem threads are rolled and lubricated to prevent galling and reduce operating torque. Available with a patented PTFE packing gland, which is adjustable in service, or with a Viton® O-ring and PTFE back-up ring. A protective dust cap is fitted to contain stem lubricant and prevent the influx of contaminants. The standard hand valves have either $\frac{3}{16}$ -inch [4.8 mm] or $\frac{1}{4}$ -inch [6.4 mm] diameter orifice size. All bonnets are assembled with a bonnet locking pin to prevent accidental removal while in service.

Metal-Seated Bonnet Assembly

The metal-seated bonnet assembly has a rotating stem with free swivel ball-type seat for long service life. The stem threads are rolled and lubricated to prevent galling and reduce operating torque. The stem seal is a patented PTFE packing gland which is adjustable in service. A protective dust cap is fitted to contain stem lubricant and prevent the influx of contaminants. The specially hardened ball seat is ideal for both gas and liquid service. All bonnets are assembled with a bonnet locking pin to prevent accidental removal while in service.

The 10,000 psig [689 barg] bonnet assembly uses a strengthened stem and bonnet. The stem seal is a patented PTFE packing gland which is adjustable in service. A protective dust cap is fitted to contain stem lubricant and prevent the influx of contaminants. This bonnet is also fitted with a larger size T-bar handle.

The high-temperature bonnet assemblies utilizes a similarly designed stem and bonnet, and incorporates adjustable GRAFOIL® O-rings and back-up pressure rings to ensure a leak-free stem seal.

Bonnet Technology, continued

Mini-Valve Bonnet Assembly

The mini-valve bonnet assembly has a compact design with a one-piece rotating stem which is 'V' tipped with a shoulder for use as a metal or soft seated valve. The stem threads are rolled and lubricated to prevent galling and reduce operating torque.

The mini-valve bonnet comes in three designs. An adjustable PTFE stem packed bonnet is suitable for panel mounting via external bonnet threads. The O-ring bonnet assemblies use a Viton® O-ring seal below the stem thread.

A GRAFOIL® packed bonnet suitable for temperatures of up to 500°F [260°C] is available for SS valves only.

Arctic Lube

The low temperature rating for standard Anderson Greenwood carbon steel and 316 stainless steel instrumentation products is -20°F [-28°C] (standard products - standard lubrication). Our -AL (Arctic Lube) option extends the lower temperature limit to -70°F [-57°C] on all stainless steel models.

Static Pressure Manifolds – M4AP and M4TP Manifolds

Product Overview

The M4AP and M4TP are block and bleed, static pressure manifolds. They are designed for use with DP-style pressure transmitters.

The manifold's two valves have free-swiveling, ball-ended stems or soft seats. The block valve isolates the instrument from the process and is open during normal operation. When the block valve is closed, the bleed valve can be opened to vent pressure from the transmitter.

The M4AP permits the transmitter's futbol flange to connect the process signal line to the manifold directly, with either a 1/2-inch pipe or tubing connection. The M4TP has a 1/2-inch NPT inlet connection. A 1/4-inch NPT purge connection is available. The 1/4-inch NPT vent port may be used for testing calibration. They may be mounted using the AGCO Mount option for ease of assembly and maintenance.

Features and Benefits

- **Cost savings** when manifolding the instruments. This eliminates several parts used in conventional methods of 'piping up' resulting in cost reduction of 20-30 percent.
- **Compact design** requires minimum space for operation and installation.
- **Fewer leak points** reduce leakage by having fewer parts to assemble.
- **Free-swiveling ball end stem (metal seat)** assures bubble-tight valve closure without seat galling.
- **The AGCO Mount provides easy instrument removal.** Direct bolting to the manifold allows the instrument to be removed independently of the piping. This facilitates repairs, service, and calibration.
- **Immediate installation** with AGCO Mount's manifold, steam block, bracket, and all associated piping can be installed without the instrument at the time of plant construction.
- **Secure mounting** is provided by the AGCO Mount. Instrument piping stability is enhanced when directly supported by the pipe stand through the manifold.
- **All valve threading is isolated.** Packing is below stem threads, body-to-bonnet seal is below the threads eliminating process fluid corrosion.
- **Less instrument damage** with the AGCO Mount. The instrument can be safely warehoused until final 'loop' checkout, reducing the chances of damage during construction.

Static Pressure Manifolds – M4AP Specifications

Metal Seat (Soft Seat available) Dimensions, inches [mm]

Dimensions, inches [mm]

Packing	A	B

4. 316 SS bolts lower pressure ratings to a maximum of 4500 psi [310 barg]. Consult factory for full rating with 316 SS bolts.

Static Pressure Manifolds – MP1 and MP2

Product Overview

The MP1 is a two-valve pressure manifold used for single instrument applications, such as block and bleed, test and calibration, and instrument zeroing. It serves as both manifold and mount in one unit.

The MP2 is a pressure manifold designed to mount two different pressure instruments simultaneously from a single pressure source. It has dual block and bleed valves, each operating independently of the other. The MP2 serves as both manifold and mount in one unit.

The block valves have free-swiveling, ball ended stems used to isolate the pressure devices from the process. During normal operation the block valves are open. However, when either valve is closed, the respective bleed valve can be used to vent pressure from the isolated instrument.

The pressure instruments are connected to the manifold with 1/2-inch FNPT union connectors or 1/2-inch MNPT union connectors.

Features and Benefits

- **Cost savings** when manifolding the instruments. This eliminates several parts used in conventional methods of 'piping up' resulting in cost reduction of 20-30 percent.
- **Compact design** requires minimum space for operation and installation.
- **Immediate installation with the AGCO Mount.** Steam block, bracket, and all associated piping can be installed without the instrument at the time of plant construction. Thus, there is no work stoppage pending instrument delivery.
- **The AGCO Mount provides secure mounting.** Instrument piping stability is enhanced when directly supported by the pipe stand through the manifold.
- **All block valve threading is isolated.** Packing is below the stem threads and seal is below body-to-bonnet threads, keeping corrosion to a minimum.
- **Free-swiveling ball end stem design** assures bubble-tight valve closure without seat galling.
- **Lower piping costs** occur when two instruments are mounted on the same manifold and pipe stand.
- **Less instrument damage** with the AGCO Mount. The instrument can be safely warehoused until final 'loop' checkout, reducing the chances of damage during construction.
- **Fewer leak points** reduces leakage by having fewer parts to assemble.

1. MP1 and MP2 includes U-bolt and nuts for 2-inch pipe mounting.

Ordering Information

MP1 V I C - 4 - BC

Model

MP1 – Pressure Manifold (one instrument) MP2 – Pressure Manifold (two instruments)

Packing

V – Teflon® H – GRAFOIL® E – Low Emissions Graphite

Seat

I – Integral (body material)

Body Material

C – CS S – 316 SS M – Monel® W – 316L SS J – Hastelloy®

Connections

- 4 – 1/2-inch FNPT Process x 1/2-inch FNPT Instrument
- 44 – 1/2-inch FNPT Process x 1/2-inch MNPT Instrument (MP1 only)
- 4-FB1 – MP2 with 1 each 1/2-inch MNPT Process x 1/2-inch FNPT Instrument

Options¹

- AL – Arctic Lubricant (low temperature service -70°F)
- BC – Accessory bracket for mounting conduit with AGCO Mount
- BL – Bonnet Lock Device (block valves) (page 154)
- FB1 – MP2 with 1 each MNPT and FNPT connectors
- SB – Steam Block
- SG – (Sour Gas) meets the requirements of NACE MR0175/ISO 15156-3 Corrigendum 2 (for Chloride conditions ≤ 50 mg/l [ppm] and NACE MR0103-2005 (SS valves only)
- SG3 – (Sour Gas) meets the requirements of NACE MR0175/ISO 15156-3 Corrigendum 2 (for Chloride conditions > 50 mg/l [ppm])

Static Pressure Manifolds – PTM and PT7 2-Valve Manifolds

Product Overview

The PT Two-Valve Calibration Manifolds are used on static pressure transmitters, switches or gauges. The shutoff valve, tee, calibration valve, and all immediate tubing/fittings are available in one simple manifold. The PT manifolds are available with either metal seats or replaceable soft seat inserts.

The PTM manifold features a unique valve seat that can be converted from soft to hard by simply removing two insert washers. No other parts are required.

The PT7 manifold is available for elevated temperatures and features an integral metal seat.

Features and Benefits

- **Cost savings** when manifolding the instruments. This eliminates several parts used in conventional methods of 'piping up' resulting in cost reduction of 20-30 percent.
- **Compact design** requires minimum space for operation and installation.
- **Rolled threads**, stem and bonnet threads are rolled for increased strength. This prevents galling and adds years to the useful life of the valve.
- **Fewer leak points** reduce leakage by having fewer parts to assemble.
- **Teflon® and GRAFOIL® adjustable packing** is easily adjusted for leak-proof and long service life.
- **Stem threads are isolated from process fluid** (O-ring stem seal). This prevents galling and corrosion of the stem threads. The O-ring isolates the stem threads from the process.
- **Back seat stem** prevents stem blowout.

Static Pressure Manifolds – A30 2-Valve Manifold

Product Overview

The A30 is a direct mounting two-valve manifold which combines an isolation valve and a vent/calibrate valve in a single unit. Standard process connections are 1/2-inch NPT threaded. The vent/calibrate port is threaded 1/4-inch NPT and provided with vent plug as standard. Suitable for pressures to 6000 psig [414 barg] and temperatures of up to 1000°F [538°C]. A30 has metal seated valves and is available with standard valve bonnets with Teflon® stem packing, or high temperature bonnets which have Graphite packing. All manifolds are supplied with two 7/16-inch UNF bolts and an instrument seal ring as standard.

Features and Benefits

- **Direct mounting compact design** requires a minimum of space for operation and installation with fewer potential leak points.
- **Installation costs reduced** by manifolding the valves, thereby eliminating several components essential for 'piping-up.'
- **Ball end stem** is free-swiveling which ensures perfect alignment, providing repetitive bubble-tight shutoff and long life.
- **Teflon® or Graphite packing below stem threads** prevents lubricant washout and thread corrosion.
- **Back seat stem** prevents stem blowout or accidental removal while in operation.
- **Threaded vent ports** allows vent to be safely piped away, supplied plugged as standard.
- **Manifold mounting**, standard pipe bracket bolts directly to the manifold providing a rigid support for the transmitter. Instrument can be easily removed for service or repair.

Static Pressure Manifolds – A30 Specifications

Dimensions, inches [mm] Threaded x Flanged

AGCO Mount MB7

A30 is available with a mounting bracket suitable for 2-inch [50 mm] pipe stand. Supplied in zinc plated CS is standard. See options for AM Kit, page 38.

Static Pressure Manifolds – A30 Specifications

Valve Bonnet Identification

Dust Cap Coding: The valve bonnet dust caps are color coded to identify the gland packing/stem.

- White:* Standard bonnet assembly Teflon® packing.
- Green:* Sour Gas service Teflon® packing.

Ring Labels: The valve bonnets have color coded ring labels for service identification.

- Red:* Vent Valves
- Blue:* Isolate Valves

Special Severe Service Materials

- Duplex UNS S31803
- 6MO UNS S31254
- Hastelloy® C276
- Incoloy® 825

CS, SS and Monel® valves are suitable for most process applications, however for severe service, A30 valves are also available in the above exotic materials. For any other material requirements, please consult the factory.

Pressure and Temperature

Valve	Teflon® Bonnet (standard)
CS, SS,	6000 psig @ 200°F [414 barg @ 93°C]
Monel®	4000 psig @ 500°F [276 barg @ 260°C]

Valve	High Temperature
CS	6000 psig @ 200°F [414 barg @ 93°C]
	1500 psig @ 850°F [103 barg @ 454°C]
SS	6000 psig @ 200°F [414 barg @ 93°C]
	1500 psig @ 1000°F [103 barg @ 538°C]

Connections

Standard Connections

- Process* Threaded 1/2-inch NPT to ANSI/ASME B1.20.1.
- Vent* Threaded 1/4-inch NPT to ANSI/ASME B1.20.1.
- Instrument* Flanged for direct mounting to transmitters.

Other Connections

- Threaded* BSP Tr to BS21
BSP F to BS2779

Please consult the factory for availability.

Notes

- Threaded connection: vent supplied with blanking plug as standard.
- All manifolds are supplied with a seal ring and two 7/16-inch UNF HT steel mounting bolts. A Teflon® seal ring is supplied with the standard bonnet; a Graphite seal ring is supplied with the high temperature bonnet.

Note

1. If SSC flange bolts are specified, manifold ratings are:
4500 psig @ 100°F [310 barg @ 38°C]

Static Pressure Manifolds – M25, M25A, M25B, M251 and M251B

Product Overview

The M25, M25A, M25B, M251 and M251B are versatile two-valve manifolds with a variety of inlet and outlet connections. Lightweight and with compact dimensions, M25/M251 manifolds enable isolation, calibration and venting in single unit.

Especially designed for use with pressure transmitter, gauges and switches, the versatile M25 two-valve manifold combines an isolation valve and vent/calibrate valve in a single unit. Process connections are either threaded or flanged. Instrument connections are available threaded with either NPT, BSP Tr or BSF threads. M25 has a threaded 1/4-inch vent/calibrate port, fitted with a plug as standard. Suitable for pressures up to 10,000 psig [689 barg] (for M251) and temperatures of up to 1000°F [538°C]. The M25/M251s are available with standard, high pressure or high temperature valve bonnets.

Applications

- Static pressure instrument mounting to threaded connection. (M25, M251 M25B and M251B)
- Gauge/instrument isolation.
- Vent or calibrate to separate threaded port.
- Liquid and vapor service.
- Static pressure instrument mounted to flanged/futbol process connection. (M25A)

- **Teflon® or GRAFOIL® packing below stem threads** prevents lubricant washout and thread corrosion.
- **Back seat stem** prevents stem blowout or accidental removal while in operation.
- **Threaded vent ports** allows vent to be safely piped away, supplied plugged as standard.
- **Manifold mounting**, all manifolds are supplied with mounting holes as standard to enable pipe bracket mounting.

Features and Benefits

- **Remote mounting compact design** requires a minimum of space for operation and installation with fewer potential leak points.
- **Installation costs reduced** by manifolding the valves, thereby eliminating several components essential for 'piping-up.'
- **Ball end stem** is free-swiveling which ensures perfect alignment, providing repetitive bubble-tight shutoff and long life.

Static Pressure Manifolds – MM2 Specifications

Product Overview

Designed for remote mounting an instrument via 1/4-inch threaded process and instrument connections, the MM2 uses H5 miniature bonnets in a block and bleed configuration. Available in SS only and with metal or soft seats, this versatile design can be converted from a metal to a soft seated version simply by fitting a soft seat and flow washer. MM2 is suitable for pressures of up to 6000 psig [414 barg] and temperatures of up to 500°F [260°C]. The bonnet is supplied with Teflon® stem packing, and options include Delrin®, PCTFE or PEEK soft seats.

Applications

- Compact instrument control loops.
- Static pressure/gauge instruments.
- Control panels.
- Gas sampling equipment.

Features and Benefits

- **Remote mounting compact design** requires minimum space for operation and installation.
- **Installation costs reduced** by manifolding the valves. This eliminates several parts used in conventional methods of 'piping up.'
- **Metal or field replaceable soft seats.** This unique seat can be converted from metal to soft simply by fitting a soft seat and flow washer. Soft seats are field replaceable for easy maintenance, extending the useful life of the valve.
- **Extended valve life,** stem threads are rolled rather than cut for increased strength and smooth valve operation.
- **Back seat design** prevents stem blowout while under pressure, or during operation.
- **Threaded vent ports** allow the vent to be safely piped away; supplied plugged as standard.
- **Manifold mounting,** manifolds are supplied with mounting holes as standard to enable surface or cabinet mounting.

Static Pressure Manifolds – MM2 Specifications

Dimensions, inches [mm] Threaded x Threaded

Connections⁴

Standard Connections

Threaded 1/4-inch NPT to ANSI/ASME B1.20.1.

Other Connections

Threaded 1/4-inch BSP Tr to BS21

Please consult the factory for availability.

Standard Materials

Valve ¹	Body	Bonnet	Stem	Soft Seat ²	Flow Washer	Packing
SS	SS, 316	316 SS	316 SS	PCTFE	316 SS	Teflon®
SG ³	SS, 316	316 SS	Monel® 400	PCTFE	316 SS	Teflon®
SG ^{3,5}	Hastelloy®	Hastelloy®	Hastelloy®	PCTM	Hastelloy®	Teflon®

Bonnet Assembly

The H5 bonnet assembly has a compact design with a one-piece rotating stem which is 'V' tipped for 'better' flow control. The stem threads are rolled and lubricated to prevent galling and reduce operating torque.

The SS bonnet is fitted with an adjustable Teflon® stem packing.

The H5 bonnets are assembled with a bonnet locking pin to prevent accidental removal in service.

Soft Seat

All miniature manifolds and valves feature a unique valve seat which may be converted from metal to soft simply by fitting a soft seat and flow washer. SS valves use PCTFE² soft seat as standard. Delrin® and PEEK seats are also available.

Notes

1. Approximate valve weight: 2.0 lb [.90 kg]. 0.136-inch [3.5 mm] diameter orifice. Valve C_v Hard seat 0.25 maximum. Valve C_v Soft seat 0.24 maximum.
2. PCTFE (Polychlorotrifluoroethylene) is exact equivalent of Kel-F®.
3. SG (Sour Gas) meets the requirements of NACE MR0175/ISO 15156-3 Corrigendum 2 (for Chloride conditions ≤ 50 mg/l [ppm]) and NACE MR0103-2005.
4. Threaded connection: vent supplied with blanking plug as standard.
5. SG3 (Sour Gas) meets the requirements of NACE MR0175/ISO 15156-3 Corrigendum 2 (for Chloride conditions > 50 mg/l [ppm]).

Liquid Level Manifolds – M4TL 2-Valve Manifold

Product Overview

The M4TL is a single-flanged, two-valve manifold consisting of two block valves with no equalizer passage. The manifold is designed for use with ΔP – style pressure transmitters in liquid level service on pressurized vessels.

The two valves in the M4TL have free-swiveling ball end stems to ensure bubble-tight shutoff. The M4TL has 1/2-inch NPT process connections, and is designed to mount directly to the differential pressure transmitter.

Like all the M4 manifolds, the M4TL may be mounted using the AGCO Mount option for easy assembly and maintenance.

Features and Benefits

- **Cost savings** when manifolding the instruments. This eliminates several parts used in conventional methods of 'piping up' resulting in cost reduction of 20-30 percent.
- **Compact design** requires minimum space for installation and operation.
- **Immediate installation** is allowed with the AGCO Mount. Steam block, bracket, and all associated piping can be installed without the instrument at the time of plant construction.
- **Less instrument damage** occurs when the instrument is safely warehoused until final 'loop' checkout, reducing the chances of damage during construction.
- **Secure mounting** is ensured by the AGCO Mount. Instrument piping stability is enhanced when directly supported by the pipe stand through the manifold.
- **Easy instrument removal** results from direct bolting to the manifold. Signal lines, purge lines, etc. left undisturbed. This facilitates repair, service, and calibration.
- **Free-swiveling ball end stem design** assures bubble-tight closure without seat galling.
- **Fewer leak points** reduce leakage by having fewer parts to assemble.
- **Valve packing** is below stem threads and seal is below body-to-bonnet threads, keeping corrosion to a minimum.

Differential Pressure Manifolds – M1 and M110 3-Valve Manifolds

Product Overview

For Applications Requiring Remote Mounting From Instrument

The M1 is a three-valve manifold designed to mount to the signal lines and instrument when the instrument has connections different than 2 $\frac{1}{8}$ -inches [54 mm] between signal taps such as recording orifice meters, small differential pressure indicators and some differential pressure switches. In these applications, the manifold is often supported by the signal lines but may be AGCO Mount supported (-AM).

The M1 manifold is available with an integral metal seat or with various replaceable, roddable soft seats. The valve orifice is $\frac{3}{16}$ -inch [4.8 mm] diameter.

The M110 manifold is a high pressure version of the M1 and is available in 316 SS with integral seats.

Features and Benefits

- **Cost savings/less labor** results when unitizing the manifolding. It eliminates numerous parts used in conventional methods of 'piping up.' Results in cost reduction of 20-30 percent.
- **Roddability characterizes** the M1 with soft seats for services prone to plugging.
- **A protective bonnet cap** increases valve life by protecting against atmospheric contamination; reduces possibility of thread galling by containment of stem lubricant.
- **Fewer leak points** reduce the chances of leakage from a unitized design.
- **Packing is below stem threads.** Galling and corrosion of the stem threads due to exposure to the process fluid is prevented. The packing isolates the stem threads from the process.
- **Replaceable soft seat** design is bubble-tight with a $\frac{3}{16}$ -inch [4.8 mm] diameter orifice as standard.
- **Increased valve life** is obtained by rolling rather than cutting stem threads. This provides a stronger, more durable thread area.
- **Integral hard back seat** protects against stem blowout and provides a secondary packing seal.
- **Stem packing is adjustable** for leakproof and long service life.
- **Test ports** are $\frac{1}{4}$ -inch FNPT ports which may be used as test connections.

Differential Pressure Manifolds – MM1 3-Valve Mini-Manifold

Product Overview

The MM1 is a miniature three-valve manifold for applications requiring remote mounting from the instrument. Made in CS, 316 SS, or brass, the MM1 features O-ring or packed bonnets with soft or metal seats.

This mini-manifold features a unique valve seat which can be converted from soft to hard by simply removing two insert washers. No other parts are required.

Used to set or reset differential pressure switches during initial plant start-up. Also used in assemblies for portable differential pressure test equipment used for any miniature differential pressure measuring device.

Features and Benefits

- **Cost savings in both materials and labor.** Manifolding the instruments eliminates several parts used in conventional methods of 'piping up.' Results in cost reduction of 20-30 percent.
- **Compact design** requires minimum space for operation and installation. Particularly useful for installations behind boards and in cabinets.
- **Back seat stem** feature prevents stem blowout.
- **Rolled threads** on stem and bonnet increase strength. This prevents galling and adds years to the useful life of the valve.
- **Fewer leak points** means reduced leakage by having fewer parts to assemble.
- **Teflon® packing (Teflon® Stem Seal)** is easily adjusted for leakproof and long service life.
- **Stem threads are isolated from process (O-ring Stem Seal).** This isolation prevents galling and corrosion of the stem threads due to exposure to the process fluid. The O-ring isolates the stem threads from the process.

Differential Pressure Manifold – A22N

Product Overview

Designed for remote mounting an instrument via threaded process and instrument connections, the A22N has two block valves, an equalizer valve and two instrument side vent/calibrate valves. Process and instrument side connections are available either 1/4-inch or 1/2-inch threaded. Vent connections are threaded 1/4-inch on all manifolds and provided with blanking plugs. The instrument connections are positioned on 2 1/8-inch [54 mm] centers but can easily be adapted to suit instruments with other center-to-center dimensions via screwed fittings. Suitable for pressures of up to 6000 psig [414 barg] and temperatures of up to 1000°F [538°C].

Applications

- Remote mounting differential pressure transmitters.
- Instrument isolation and zeroing.
- Instrument venting.
- Instrument calibration.
- Liquid and vapor service.
- Instruments with other than 2 1/8-inch [54 mm] centers.
- Differential Pressure changes.

Features and Benefits

- **Remote mounting compact design** requires a minimum of space for operation and installation with fewer potential leak points.
- **Installation costs are reduced** by manifolding the valves, thereby eliminating several components essential for 'piping-up.'
- **Ball end stem is free-swiveling** which ensures perfect alignment, providing repetitive bubble-tight shutoff and long life.
- **Teflon® or Graphite packing** below the stem threads prevents lubricant washout and thread corrosion.
- **Back seat stem** prevents stem blowout or accidental removal while in operation.
- **Threaded vent ports** allow vent to be safely piped away, supplied plugged as standard.
- **Manifold mounting**, all manifolds are supplied with mounting holes as standard to enable pipe bracket mounting.

Differential Pressure Manifolds – M3A Equalizer Manifold

Product Overview

The M3A Equalizer Manifold is designed for use with differential pressure transmitters where low-cost direct coupling is desired and piping specifications require individual block valves. The valve is Teflon® -packed and uses a self-aligning SS ball seat. This single valve serves to equalize the transmitter.

The M3A fits between the transmitter and the 2-bolt flanges (futbols). For complete mounting, each manifold package includes two Teflon® or GRAFOIL® gaskets and four 7/16-inch – 20 x 2 1/2-inch zinc cobalt plated alloy steel bolts.

Features and Benefits

- **Cost savings** are realized by manifolding the instrument, which eliminates several parts used in conventional methods of 'piping-up.' Construction savings of 20-30 percent may be realized.
- **Compact design** requires minimum space for operation and installation.
- **Fewer connections** reduces leakage by having fewer parts to assemble.
- **Adjustable stem packing** results in long, leak-proof service.
- **Increased valve life** results from rolled stem threads rather than cut, providing a stronger, more durable thread area.
- **Integral hard back seat** protects against stem blowout.
- **Free-swiveling ball end stem (metal seat)** provides bubble-tight, metal-to-metal valve closure without seat galling.
- **Packing below stem threads** prevents galling and corrosion of the stem threads exposed to process fluid.

Differential Pressure Manifolds - M4A and M4T 3-Valve Manifolds

Product Overview

Our M4 Manifold is a three-valve unit designed for mounting on differential pressure transmitters having 2 1/8-inch [54 mm] center-to-center connections.

For direct or remote mounting, the M4A permits the transmitter's flange to connect the process signal lines to the manifold directly, with either 1/2-inch pipe or tubing connections. It contains two main block valves and an equalizing valve.

For close or remote mounting, the M4T Manifold is used in applications where direct coupling to orifice flanges is not desired. On the instrument side, the M4T bolts directly to the transmitter. On the process side, two 1/2-inch NPT or AGCO-Tube connections are provided for piping or tubing into the flange taps.

General Mounting Techniques

The M4A mounts either directly at the orifice flange union or to a 2-inch pipe stand using the AGCO Mount kit.

The M4T is designed for remote mounting on a 2-inch pipe stand and using the AGCO Mount kit.

Features and Benefits

- **Cost savings/less labor** results when utilizing the manifold. It eliminates numerous parts used in conventional methods of 'piping up.' Results in cost reduction of 20-30 percent.
- **Stem backout prevention** eliminates stem blowout, or accidental removal while in operation.
- **Bonnet-to-body seal** is metal-to-metal in constant compression below the bonnet threads. This prevents bonnet thread process corrosion, eliminates tensile breakage of bonnet, and creates a reliable seal point.
- **Roddability** of soft seated valves means impulse lines can be cleaned without using purge. Simplifies maintenance and helps ensure measurement accuracy.
- **Field-replaceable soft seats** allow replacement of seat inserts without removing the valve from the line.
- **Stem finish** is burnished to a 16 RMS mirror finish in the packing area. Enables smooth stem operation and extended packing life.
- **Rolled threads** provide additional thread strength because the stem and bonnet threads are rolled, not cut.

- **Fugitive emissions.** To meet low fugitive emissions requirements, special Graphite sealed bonnets are available.
- **Fewer parts** means fewer leak points which mean fewer fugitive emissions.
- **Manifold mounts directly to the pipe stand.** The AGCO Mount supports the transmitter and allows loop installation to be completed without the transmitter. Instrument removal for service or repair does not disturb installation.
- **Teflon®, GRAFOIL®, or Graphite packing** adjusts easily. Decreases downtime and increases valve life.
- **Integral hard back seat** protects against stem blowout and forms a secondary seal.
- **Protective bonnet cap** (Teflon® packed only) increases valve life by protecting against atmospheric contamination; reduces possibility of thread galling by containment of stem lubricant.

Differential Pressure Manifolds – M45A Specifications

Product Overview

Our M45A manifold is a three-valve unit with $\frac{3}{8}$ -inch [9.5 mm] orifice block valves designed for mounting on differential pressure transmitters having $2\frac{1}{8}$ -inch [54 mm] center-to-center connections.

For direct or remote mounting, the M45A permits the transmitter's futbol flanges to connect the process signal lines to the manifold directly, with either $\frac{1}{2}$ -inch pipe or tubing connections. It contains two main block valves and an equalizing valve.

Same as M4A except bonnet to accommodate $\frac{3}{8}$ -inch [9.5 mm] orifice soft seat block valves and metal seat equalizer valve.

Dimensions, inches [mm]

Dimensions, inches [mm]

Packing	A	B
Teflon®	11.90 [302.3]	3.40 [86.4]
GRAFOIL®	11.90 [302.3]	4.05 [102.9]
O-ring	11.36 [288.5]	3.40 [86.4]

Note

1. Bottom static (test) connection available. See options, page 74.

Differential Pressure Manifolds – M45A Specifications

Notes

1. Approximate valve weight: 7.1 lb [3.2 kg]. 0.375-inch [9.5 mm] diameter orifice. Valve C_v 3.0 maximum.
2. Equalizer valve utilizes free-swiveling ball ended stem. Equalizer orifice size 0.187-inch [4.8 mm].
3. PCTFE (Polychlorotrifluoroethylene is exact equivalent of Kel-F®), PEEK and Teflon® also available.
4. CS is zinc cobalt plated to resist corrosion.
5. SG (Sour Gas) meets the requirements of NACE MR0175/ISO 15156-3 Corrigendum 2 (for Chloride conditions ≤ 50 mg/l [ppm]) and NACE MR0103-2005.
6. SG3 (Sour Gas) meets the requirements of NACE MR0175/ISO 15156-3 Corrigendum 2 (for Chloride conditions > 50 mg/l [ppm]).
7. 316 SS bolts lower pressure ratings to a maximum of 4500 psi [310 barg]. Consult factory for full rating with 316 SS bolts.

Differential Pressure Manifolds – M4, M4T and M45A Options

Features and Benefits

- **Lowers maintenance costs** by simply removing four transmitter bolts, disconnecting signal leads and performing needed transmitter maintenance.
- **Reduces potential environmental contamination** and the possibility of signal-line damage.
- **Reduces pipe stand corrosion** by using the bracket overhang and plastic rain hat to cover the pipe stand.
- **Optional steam heat block** permits tracing the manifold and transmitter from a common connection.
- **Shipped ready for assembly** and installation; includes optional heat block and purge ports (if specified).
- **AGCO Mount system is essentially free** if you get credit from the transmitter company for the mounting bracket and futbol connectors.

AGCO Mount With M4 Manifold Dimensions, inches [mm]

AGCO-Tube: Integral Tube Fitting Design

- Proven design performance.
- No tube twist on makeup.
- Low torque in assembly.
- Male Nut
 - Silver plated to prevent galling.
 - Threads are rolled for additional strength.
 - Gives superior tubing support for vibration resistance.
- Bubble-tight seal on make and remakes.
- Fitting will hold to the burst of the tubing.
- Makeup is industry standard 1¹/₄ turns from finger tight.
- Remake is 1/2 turn from finger tight which brings you back to original position, then snug slightly to respring the ferrule(s) into a sealing position.

MA, M4T and M45A Options

Single Ferrule 'Bowling' Design

Dual Ferrule 'Interlocking' Design

Differential Pressure Manifolds – AX3A and AX3T 3-Valve Manifolds

Product Overview

The AX3 is a three-valve manifold designed for direct mounting to standard differential pressure transmitters. Lightweight and compact, the manifolds enable instrument operation, isolation and zeroing in a single unit. Process connections are available either threaded 1/4- and 1/2-inch NPT or flanged to accept standard futbol flanges. Suitable for pressures of up to 6000 psig [414 barg] and temperatures of 1000°F [538°C]. AX3 is available metal seated with the option of Teflon® or Graphite stem packing.

Applications

- Direct mounting differential pressure transmitters.
- Instrument isolation.
- Instrument zeroing.
- Liquid and vapor service.

Features and Benefits

- **Direct mounting compact design** requires a minimum of space for operation and installation with fewer potential leak points.
- **Installation costs reduced** by manifolding the valves, thereby eliminating several components essential for 'piping-up.'
- **Free-swiveling ball end stem** ensures perfect alignment, providing repetitive bubble-tight shutoff and long life.
- **Packing below threads** Teflon® or Graphite packing below the stem threads prevents lubricant washout and thread corrosion.
- **Back seat stem** prevents stem blowout or accidental removal while in operation.
- **Manifold mounting**, standard pipe bracket bolts directly to the manifold providing a rigid support for the transmitter. Instrument can be easily removed for service or repair.

Differential Pressure Manifolds – AX3 Specifications

AX3T Dimensions, inches [mm] – Threaded x Flanged

AGCO Mount MB7

The AGCO Mount principle is to mount the manifold, not the transmitter, enabling easier instrument loop installation and lower on-going maintenance costs. The transmitter is simply removed by releasing the four mounting bolts and disconnecting signal leads. AX3 is available with an AGCO Mount suitable for 2-inch [50 mm] pipe stand. Supplied in zinc plated CS as standard. See page 80.

AX3A Dimensions, inches [mm] – Flanged x Flanged

Differential Pressure Manifolds – AX3 Specifications

Valve Bonnet Identification

Dust Cap Coding: The valve bonnet dust caps are color coded to identify the gland packing/stem.

White: Standard bonnet assembly Teflon® packing.

Green: Sour Gas service Teflon® packing.

Ring Labels: The valve bonnets have color coded ring labels for service identification.

Blue: Isolate Valves

Green: Equalize Valves

Connections

Standard Connections

Process Threaded or flanged. The standard thread type is 1/2-inch NPT to ANSI/ASME B1.20.1.

Instrument Flanged for direct mounting to transmitters on 2 1/8-inch [54 mm] centers. Flanged connections are on 2 1/8-inch [54 mm] centers.

Other Connections

Process Threaded BSP Tr to BS21 and BSP F to BS2779 are also available.

Notes

1. Approximate valve weight: 3.7 lb [1.7 kg]. 0.187-inches [4.8 mm] diameter orifice. Valve C_v 0.52 maximum.
2. SG (Sour Gas) meets the requirements of NACE MR0175/ISO 15156-3 Corrigendum 2 (for Chloride conditions ≤ 50 mg/l [ppm]) and NACE MR0103-2005.
3. Metal seats are integral with the body.
4. All manifolds are supplied with seal rings and four 7/16-inch UNF HT steel mounting bolts. Teflon® seal rings are supplied with the standard bonnet; Graphite seal rings are supplied with high temperature bonnet.
5. SG3 (Sour Gas) meets the requirements of NACE MR0175/ISO 15156-3 Corrigendum 2 (for Chloride conditions > 50 mg/l [ppm]).

Futbol Flanges

Futbol Flanges are available for bolting to the process side of a flanged manifold. This provides the ideal solution to welded connection requirements, allowing the flanges to be welded to process piping while keeping the flexibility to remove the manifold when required, for maintenance or repair.

Differential Pressure Manifolds – M20 Meter Manifold

Product Overview

The M20 Manifold is a rotary-positioned differential pressure transmitter manifold. It uses a dual-rotary element with passages cut to perform the functions of a double-block-bleed manifold, with single handle actuation.

The M20 ensures correct valve sequencing every time the manifold is manipulated from RUN-to-ZERO-to-OFF, or from OFF-to-ZERO-to-RUN.

Manual

In its manual configuration, the M20 is virtually foolproof. An operator cannot mistakenly over-range the transmitter on the wrong side, leave the equalizer valve open, or forget to open the manifold block valve after zeroing.

The M20 is uniquely suited for applications having serious space limitations, such as winterizing enclosures, offshore oil production platforms, and power plant rack designs. For hazardous process fluids demanding special handling and caution, a dual locking and venting feature assures personnel safety.

Features and Benefits

- **This unique manifold** has many desirable features not found in conventional manifolds. It is particularly useful in chemical process.
- **Instrument enclosures** utilize the single handle to externally zero the transmitter without opening the enclosure.
- **Handle is lockable.** It may be retained-screw locked in any position or padlocked in OFF position, promoting personnel safety.
- **Manifold mounts directly onto pipe stand.** The AGCO Mount supports the transmitter and allows loop installation to be completed without the transmitter. Instrument removal for service or repair does not disturb installation.
- **Double block-bleed valving** allows on-stream checking of seat tightness.
- **Correct valve sequence is fixed.** Transmitter is properly pressurized when commissioned. Zeroing from RUN or OFF is done correctly every time. Port sequencing always admits high side pressure to transmitter first, preventing possible zero shift from reverse over-ranging.
- **Safe venting** of both manifold and instrument cavities to a safe disposal point in the OFF position, reducing chances of injury during the maintenance procedure. When process fluid is toxic, carcinogenic, or otherwise dangerous, cavities can be flushed at transmitter backside taps before removing the transmitter.
- **Seal fluids** cannot be lost when manipulating the M20 to ZERO, RUN or OFF – big savings in down time and seal fluids.

Differential Pressure Manifolds – M20 Specifications

Pressure vs. Temperature

Operation Sequence

Field Calibration (must have M20 with -FC option):

- Manifold in 'OFF' position.
- Vent low side of instrument (use vent on low side of transmitter).
- Apply calibration pressure through Field Test Valve.

Notes

- Field calibration option (allows transmitter to be calibrated in the field).
- Also zero can vent to atmosphere to remove transmitter.

2. 316 SS bolts lower pressure ratings to a maximum of 4500 psi [310 barg]. Consult factory for full rating with 316 SS bolts.

Differential Pressure Manifolds – M24 5-Valve

Product Overview

The M24 is a five-valve manifold designed for direct mounting to differential pressure transmitters. Lightweight and with compact dimensions, M24 manifolds enable instrument operation, isolation, zeroing and venting in a single unit.

Manufactured from a precision casting with two block valves, an equalize valve and two instrument vent/calibrate valves, the M24 is coupled directly to differential pressure transmitters via standard instrument flanged connections on 2¹/₈-inch [54 mm] centers. (Non-standard instrument centers are also available). Process connections are available threaded or flanged to accept standard futbol flanges. Vent connections are threaded 1/4-inch on all manifolds and provided with vent plugs as standard. Suitable for pressures of up to 6000 psig [414 barg] and temperatures of up to 1000°F [538°C]. M24 is available with a metal seat and the option of Teflon® or GRAFOIL® stem packing.

Applications

- Direct-mounting differential pressure transmitters.
- Instrument isolation and zeroing.
- Instrument venting to close system.
- Instrument calibration.
- Liquid and vapor service.

Features and Benefits

- **Direct mounting compact design** requires a minimum of space for operation and installation with fewer potential leak points.
- **Installation costs reduced** by manifolding the valves, thereby eliminating several components essential for 'piping-up.'
- **Ball end stem** free-swiveling ball-end stem ensures perfect alignment, providing repetitive bubble-tight shut-off and long life.
- **Packing below threads** Teflon® or GRAFOIL® packing below the stem threads prevents lubricant washout and thread corrosion.
- **Back seat stem** prevents stem blowout or accidental removal while in operation.
- **Threaded vent ports** allow vent to be safely piped away, supplied plugged as standard.
- **Manifold mounting**, standard pipe bracket bolts directly to the manifold providing a rigid support for the transmitter. Instrument can be easily removed for service or repair.

Hastelloy® C276

Incoloy® 825

For any other material requirements, please consult the factory.

AGCO Mount Dimensions, inches [mm]

AGCO Mount MB55

The AGCO Mount principle is to mount the manifold not the transmitter enabling easier instrument loop installations and lower on-going maintenance costs. The transmitter is simply removed by releasing the four mounting bolts and disconnecting signal leads. M24 utilizes a MB55 AGCO Mount, suitable for 2-inch [50 mm] NB pipe stand. Supplied in zinc plated CS as standard.

Differential Pressure Manifolds – M24 Specifications

Valve Bonnet Identification

Dust Cap Coding: The valve bonnet dust caps are color coded to identify the gland packing/stem.

White: Standard bonnet assembly Teflon® packing.

Green: Sour Gas service Teflon® packing.

Ring Labels: The valve bonnets have color coded ring labels for service identification.

Red: Vent Valves

Blue: Isolate Valves

Green: Equalize Valves

Connections¹

Standard Connections

Process Threaded 1/2-inch NPT to ANSI/ASME B1.20.1 on 2 1/8-inch [54 mm] centers.

Instrument Flanged for direct mounting to transmitters on 2 1/8-inch [54 mm] centers. Flanged connections are on 2 1/8-inch [54 mm] centers.

Vent Threaded 1/4-inch NPT to ANSI/ASME B1.20.1.

Other Connections

Threaded BSP Tr to BS21
BSP F to BS2779

Please consult the factory for availability.

Futbol Flanges

Futbol Flanges are available for bolting to the process side of a flanged manifold. This provides the ideal solution to welded connection requirements, allowing the flanges to be welded to process piping while keeping the flexibility to remove the manifold when required, for maintenance or repair.

Connection	CS	SS
1/2" FNPT	KFC-4	KFS-4
1/2" MNPT	KFC-4M	KFS-4M
1/2" Butt weld	KFC-4BW	KFS-4BW
1/2" Socket Weld	KFC-4B	KFS-4B

Notes

1. Threaded connection: vent supplied with blanking plug as standard.
2. All manifolds are supplied with seal rings and four 7/16-inch UNF HT steel mounting bolts. Teflon® seal rings are supplied with the standard bonnet; Graphite seal rings are supplied with high temperature bonnet.

Differential Pressure Manifolds – A26 5-Valve

Product Overview

The A26 is a five-valve manifold designed for mounting to differential pressure transmitters. Lightweight and with compact dimensions, A26 manifolds enable instrument operation, isolation, zeroing and venting in a single unit.

The A26 is coupled directly to differential pressure transmitters via standard instrument side flanged connections on 2 1/8-inch [54 mm] centers. Process connections are available threaded 1/4-inch and 1/2-inch NPT. Vent connections are threaded 1/4-inch NPT on all manifolds and provided with vent plugs as standard. Suitable for pressures of up to 6000 psig [414 barg] and temperatures of up to 1000°F [538°C], A26 is available with a metal seat and the option of Teflon® or Graphite stem packing.

Applications

- Direct-mounting differential pressure transmitters.
- Instrument isolation and zeroing.
- Instrument venting to close system.
- Instrument calibration.
- Liquid and vapor service.

Features and Benefits

- **Direct mounting compact design** requires a minimum of space for operation and installation with fewer potential leak points.
- **Installation costs reduced** by manifolding the valves, thereby eliminating several components essential for 'piping-up.'
- **Ball end stem** free-swiveling ball-end stem ensures perfect alignment, providing repetitive bubble-tight shut-off and long life.
- **Packing below threads** Teflon® or Graphite packing below the stem threads prevents lubricant washout and thread corrosion.
- **Back seat stem** prevents stem blowout or accidental removal while in operation.
- **Threaded vent ports** allow vent to be safely piped away, supplied plugged as standard.
- **Manifold mounting**, standard pipe bracket bolts directly to the manifold providing a rigid support for the transmitter. Instrument can be easily removed for service or repair.

Differential Pressure Manifolds – MDP 5-Valve

Product Overview

The MDP is a five valve manifold designed for direct mounting to differential pressure transmitters. Lightweight and with compact dimensions, MDP manifolds enable instrument operation, isolation, zeroing and venting in a single unit.

Manufactured with two block valves, an equalize valve and two instrument vent/calibrate valves, the MDP is coupled directly to differential pressure transmitters via standard instrument flanged connections on 2 1/8-inch [54 mm] centers. (Non-standard instrument centers are also available). Process connections are available threaded or flanged to accept standard futbol flanges. Vent connections are threaded 1/4-inch on all manifolds and provided with vent plugs as standard. Suitable for pressures of up to 6000 psig [414 barg] and temperatures of up to 1000°F [538°C]. MDP is available with a metal seat and the option of Teflon® or GRAFOIL® stem packing.

Applications

- Direct-mounting differential pressure transmitters.
- Instrument isolation and zeroing.
- Instrument venting to close system.
- Instrument calibration.
- Liquid and vapor service.

Features and Benefits

- **Direct mounting compact design** requires a minimum of space for operation and installation with fewer potential leak points.
- **Installation costs reduced** by manifolding the valves, thereby eliminating several components essential for 'piping-up.'
- **Ball end stem** free-swiveling ball-end stem ensures perfect alignment, providing repetitive bubble-tight shut-off and long life.
- **Packing below threads** Teflon® or GRAFOIL® packing below the stem threads prevents lubricant washout and thread corrosion.
- **Back seat stem** prevents stem blow-out or accidental removal while in operation.
- **Threaded vent ports** allow vent to be safely piped away, supplied plugged as standard.
- **Manifold mounting**, standard pipe bracket bolts directly to the manifold providing a rigid support for the transmitter. Instrument can be easily removed for service or repair.

Valve Bonnet Identification

Dust Cap Coding: The valve bonnet dust caps are color coded to identify the gland packing/stem.

White: Standard bonnet assembly Teflon® packing.

Green: Sour Gas service Teflon® packing.

Connections

Standard Connections

Process Threaded 1/2-inch NPT to ANSI/ASME B1.20.1.

Instrument Flanged for direct mounting to transmitters on 2 1/8-inch [54 mm] centers. Flanged connections are on 2 1/8-inch [54 mm] centers.

Vent Threaded 1/4-inch NPT to ANSI/ASME B1.20.1.

Notes

1. Threaded connection: vent supplied with blanking plug as standard.
2. All manifolds are supplied with seal rings and four 7/16-inch UNF HT steel mounting bolts. Teflon® seal rings are supplied with the standard bonnet; Graphite seal rings are supplied with high temperature bonnet.

Pressure and Temperature Ratings

Options

- AL – Arctic Lubricant (low temperature service -70°F) - not available for CS valves
- AM – AGCO Mount Kit for 2-inch pipe stand mounting of manifold (page 80)
- AT – Tamper-proof Bonnet
- BL – Bonnet Lock Device (Accessories, page 154)
- CB – Ceramic Ball Ended Stem
- K – Key for -AT
- (2) LAT Lockable Tamper-proof Bonnet (Block Valves only)
- (3) LAT Lockable Tamper-proof Bonnet (Block Valves and Vent Valves only)
- (5) LAT Lockable Tamper-proof Bonnet (All Valves)
- OC – Cleaned for oxygen service
- R3V – Add for use with Rosemount® Model 3051C (SS 18-8 Bolts)
- SSB – 316 SS Flange Bolt (B8M Class 2) - will provide full pressure rating
- SSC¹ – 316 Flange Bolt (B8M) - maximum pressure rating 4500 psi [310 barg]
- SG – (Sour Gas) meets the requirements of NACE MR0175/ISO 15156-3 Corrigendum 2 (for Chloride conditions ≤ 50 mg/l [ppm]) and NACE MR0103-2005 (SS valves only)
- SG3 – (Sour Gas) meets the requirements of NACE MR0175/ISO 15156-3 Corrigendum 2 (for Chloride conditions > 50 mg/l [ppm])
- ST – Stellite Ball Ended Stem
- SP – Special Requirements - please specify

Note

1. 316 SS bolts lower pressure ratings to a maximum of 4500 psi [310 barg]. Consult factory for full rating with 316 SS bolts.

Differential Pressure Manifolds – DPM 5-Valve ASME B31.1 or B31.3 Meets MSS SP-105

Product Overview

The DPM is a five-valve manifold designed for remote mounting to differential pressure transmitters. Lightweight and with compact dimensions, DPM manifolds enable instrument operation, isolation, zeroing and venting in a single unit. Two block valves, one equalizer valve and two vent/test valves are combined into a compact unit designed for rack or pipe-stand mounting. Two 1/4-inch FNPT vent/test ports are provided for ease of venting and field calibration of the instrument.

Features and Benefits

- **Direct mounting compact design** requires a minimum of space for operation and installation with fewer potential leak points.
- **Installation costs reduced** by manifolding the valves, thereby eliminating several components essential for 'piping-up.'
- **Ball end stem** free-swiveling ball-end stem ensures perfect alignment, providing repetitive bubble-tight shut-off and long life.
- **Packing below threads** Teflon® or GRAFOIL® packing below the stem threads prevents lubricant washout and thread corrosion.
- **Back seat stem** prevents stem blowout or accidental removal while in operation.
- **Threaded vent ports** allow vent to be safely piped away, supplied plugged as standard.
- **Manifold mounting**, standard pipe bracket bolts directly to the manifold providing a rigid support for the transmitter. Instrument can be easily removed for service or repair.

1. AT = Single ferrule SS fitting for 1/2-inch tubing.
ATD = Double ferrule SS fitting for 1/2-inch tubing.
2. Tube Stubs are 6-inch long x 0.065-inch wall.
3. Tube Stubs are 6-inch long x 0.095-inch wall.
4. All Manifolds come standard with GRAFOIL® packing, integral seats, bonnet locks, and are subjected to hydrostatic testing.
5. See page 156 for Code Requirements.

Differential Pressure Manifolds – MM5 5-Valve

Product Overview

The MM5 is a five-valve miniature manifold designed for instrument installations where space is restricted. Lightweight and with compact dimensions, MM5 manifolds are designed for flow metering and differential pressure transmitters to enable instrument operation, isolation, zeroing and venting in a single unit.

Designed for remote mounting from the instrument via 1/4-inch NPT threaded instrument and process connections, the MM5 uses H5 miniature bonnets which are available with metal or soft seats. This versatile design can be converted to soft seats simply by fitting a soft seat and flow washer. Available in stainless steel only MM5 has two block valves, an equalizer valve and two vent valves. Suitable for pressure up to 6000 psig [414 barg] and temperatures of up to 500°F [260°C], MM5 has a Teflon® stem packing and the choice of Delrin®, PCTFE or PEEK soft seats.

Applications

- Compact instrument control loops.
- Differential Pressure instruments.
- Control Panels.
- Gas sampling equipment.
- Differential Pressure changes.

Features and Benefits

- **Remote mounting compact design** requires a minimum of space for operation and installation with fewer potential leak points.
- **Installation costs reduced** by manifolding the valves. This eliminates several parts used in conventional methods for 'piping-up.'
- **Metal or field replaceable soft seats**, this unique seat can be converted from metal to soft simply by fitting a soft seat and flow washer. Soft seats are field replaceable for easy maintenance, extending the useful life of the valve.
- **Extended valve life** results from rolled stem threads rather than cut, providing a stronger, more durable thread area.
- **Back seat stem** prevents stem blowout or accidental removal while in operation.
- **Threaded vent ports** allow the vent to be safely piped away, supplied plugged as standard.
- **Manifold mounting**, manifolds are supplied with mounting holes as standard to enable surface or cabinet mounting.

Differential Pressure Manifolds – MM5 Specifications

MM5 Dimensions, inches [mm]

MM5 Standard Materials

Valve ¹	Body	Bonnet	Stem	Soft Seat ²	Flow Washer	Packing
SS	316 SS	316 SS	316 SS	PCTFE	316 SS	Teflon®
SG ³	316 SS	316 SS	Monel® 400	PCTFE	316 SS	Teflon®

Connections

Standard Connections

Threaded 1/4-inch NPT to ANSI/ASME B1.20.1.

Other Connections

Threaded 1/4-inch BSP Tr to BS21

Please consult the factory for availability.

Bonnet Assembly

The H5 bonnet assembly has a compact design with a one-piece rotating stem which is 'V' tipped for 'better' flow control. The stem threads are rolled and lubricated to prevent galling and reduce operating torque.

The SS bonnet is fitted with an adjustable Teflon® stem packing.

The H5 bonnets are assembled with a bonnet locking pin to prevent accidental removal in service.

Soft Seat

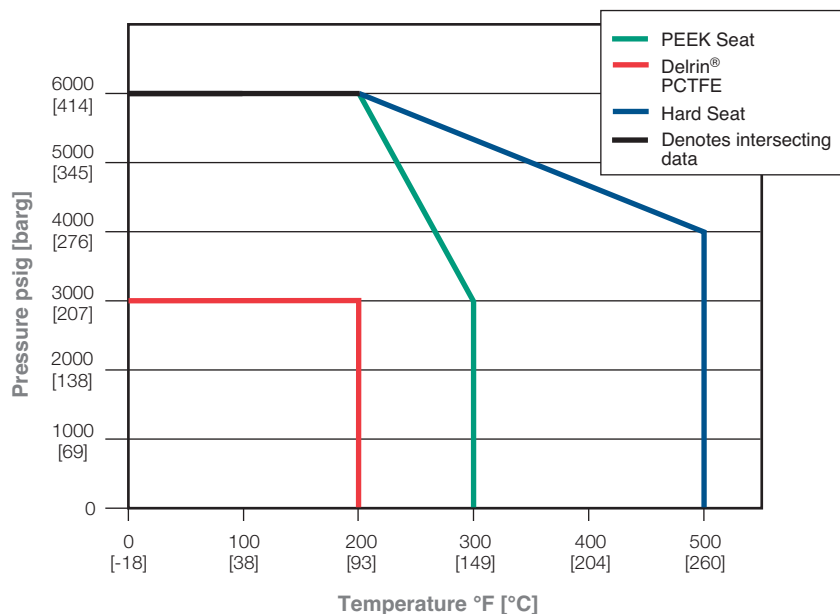

All miniature manifolds and valves feature a unique valve seat which may be converted from metal to soft simply by fitting a soft seat and flow washer. SS valves use PCTFE² soft seat as standard. Delrin® and PEEK seats are also available.

Notes

1. Approximate valve weight: 6.0 lb [2.7 kg].
0.136-inch [3.5 mm] diameter orifice.
Valve Cv hard seat 0.25 maximum.
Valve Cv soft seat 0.24 maximum.
2. PCTFE (Polychlorotrifluoroethylene) is the exact equivalent of Kel-F®.
3. SG (Sour Gas) meets the requirements of NACE MR0175/ISO 15156-3 Corrigendum 2 (for Chloride conditions ≤ 50 mg/l [ppm]) and NACE MR0103-2005.
4. Threaded connection – vent supplied with blocking plug as standard.

Integral Manifolds – MC and MT

Product Overview

Integral manifolds are those uniquely connected to the transmitter of a specific manufacturer's model and cannot be used on a different transmitter brand. This section is presently characterized by manifolds designed specifically for Rosemount® Transmitter Models 3051, 2024 and 3095.

The manifold/transmitter assembly has the advantage of small size, light weight and may be either 2-inch pipe stand or wall mounted. Plugged or valved vent/test ports are standard for field calibration checks.

This section has two parts:

1. Integral manifolds.
2. Integral manifolds for ASME B31.1 or B31.3 fossil fuel power plants.

Coplanar™ Compatible

All the Anderson Greenwood Integral Manifolds are designed and thoroughly tested to be compatible with the Rosemount® Coplanar™ pressure transmitters including the Model 3051C, Model 3051P, Model 2024 and the Model 3095 Multivariable™ transmitters.

Coplanar™ Style Transmitters

Rosemount®'s unique Coplanar™ design (sense diaphragms are on the same plane) has allowed Anderson Greenwood to develop a new series of process instrument manifolds specifically designed to 'integrate' the manifold to the transmitter.

Bonnet Assembly Feature

- **Ball end stem** eliminates seat galling, provides bubble-tight shutoff and long life. The hardened, non-rotating ball ensures perfect alignment, closure after closure.
- **Packing below threads** prevents lubricant washout, thread corrosion, and keeps solids from entering the thread area which can cause galling. Also prevents process contamination.
- **Adjustable packing** adjusts easily; loosen jam nut, tighten bushing slightly, then retighten jam nut. Decreases packing replacement downtime and increases valve life.

- **Dust cover** prevents lubricant washout and keeps contaminants (dirt, rain, etc.) out of bonnet assembly.
- **Safety back seating** prevents stem blowout or accidental removal while in operation. Also provides a metal-to-metal secondary stem seal while in the full open position.
- **Chrome plating of 316 SS stem** prevents galling or freezing of thread when similar metals mate. Rolled threads provide additional thread strength. The stem, bonnet, and male NPT threads are rolled, not cut.
- **Mirror stem finish** burnished to a 16 RMS finish in the packing area. Enables smooth stem operation and extends packing life.
- **Body-Bonnet seal** is in constant compression, below the bonnet threads. This prevents thread corrosion, eliminates possible tensile breakage of bonnet and gives a reliable seal point.
- **Bonnet lock pin** is another safety feature, which prevents the accidental separation of the bonnet from the body. However, normal valve maintenance and repair are still easily accomplished.
- **Ease of installation commissioning.** Patented porting design allows complete venting of process fluids before startup.

Integral Manifolds – MC2 2-Valve Manifold for Static Pressure

Dimensions, inches [mm]

Dimensions, inches [mm]

Valve ¹	A	B
Teflon® Packed	6.85 [174.0]	5.10 [129.5]

Integral Manifolds – MB for Bottom Inlet, Low Profile Transmitters

Product Overview

The MB integral manifold is uniquely connected to a low-profile transmitter with a flanged bottom inlet 2½-inches [54 mm] center-to-center connection.

The manifold/transmitter assembly has the advantage of small size, light weight and may be either 2-inch pipe stand or wall mounted. Plugged or valved vent/test ports are standard for field calibration checks.

This section has two parts:

1. Integral manifolds.
2. Integral manifolds for ASME B31.1 or B31.3 fossil fuel power plants.

Bonnet Assembly Feature

- **Ball end stem** eliminates seat galling, provides bubble-tight shutoff and long life. The hardened, non-rotating ball ensures perfect alignment, closure after closure.
- **Packing below threads** prevents lubricant washout, thread corrosion, and keeps solids from entering the thread area which can cause galling. Also prevents process contamination.
- **Adjustable packing** adjusts easily; loosen jam nut, tighten bushing slightly, then retighten jam nut. Decreases packing replacement downtime and increases valve life.
- **Dust cover** prevents lubricant washout and keeps contaminants (dirt, rain, etc.) out of bonnet assembly.
- **Safety back seating** prevents stem blowout or accidental removal while in operation. Also provides a metal-to-metal secondary stem seal while in the full open position.
- **Chrome plating of 316 SS stem** prevents galling or freezing of thread when similar metals mate. Rolled threads provide additional thread strength. The stem, bonnet, and male NPT threads are rolled, not cut.
- **Mirror stem finish** burnished to a 16 RMS finish in the packing area. Enables smooth stem operation and extends packing life.
- **Body-Bonnet seal** is in constant compression, below the bonnet threads. This prevents thread corrosion, eliminates possible tensile breakage of bonnet and gives a reliable seal point.
- **Bonnet lock pin** is another safety feature, which prevents the accidental separation of the bonnet from the body. However, normal valve maintenance and repair are still easily accomplished.

Integral Manifolds – MB2 2-Valve Manifold for Static Pressure

Dimensions, inches [mm]

Dimensions, inches [mm]

Valve ¹	A	B
Teflon® Packed	6.85 [174.0]	5.10 [129.5]

IntelliMount Systems – IMSA and IMST

Product Overview

The IntelliMount™ System provides distinct advantages by providing the simplest and most effective means to install, calibrate and service your Coplanar™ style transmitters. Just what you've come to expect from the leader in process instrument manifold technology.

All the Anderson Greenwood IntelliMount™ System manifolds are designed and thoroughly tested to be compatible with the Rosemount® Coplanar™ style pressure transmitters including the Model 3051C, Model 3051P, Model 2024 and the Model 3095 Multivariable™ transmitters.

The design of the Coplanar™ style transmitters (process isolation diaphragms are on the same plane) has allowed Anderson Greenwood to develop a unique series of process instrument manifolds. The two-piece construction of the IntelliMount™ System has been designed to allow the block-valve module to remain connected to the orifice while the instrument module and transmitter assembly can be easily and safely removed for shop calibration or maintenance.

Two Models Available

- **Direct Mounted (Flange x Flange):** Designed primarily for horizontal installations, the IntelliMount™ System provides true direct coupling to the primary element in the smallest possible space.
- **Remote Mounted (Pipe x Flange):** Used in more traditional applications on gas, vapor or liquid service, the remote mounted IntelliMount™ System is designed for ease of installation and use.

Features and Benefits

- **Two-Piece modular assembly** consisting of a block-valve module (containing two isolation valves) and the instrument module (containing the equalize and vent valves), which can be easily disassembled and reassembled in the field. The interface between the block valve and instrument modules is a gasket-sealed connection that can be readily remade and has been proof tested to beyond 25,000 psig [1724 barg].

- **Directly mounts** to the Coplanar™ style transmitter, eliminating the need for the Coplanar™ or traditional flange adapters that allow connection of Coplanar™ style transmitters to conventional manifolds.
- **Modular construction** allows field installation of the block-valve module independent of the instrument module and transmitter. The block-valve module remains in place during instrument calibration and potentially eliminates the need for separate isolation valves.
- **Maximum accuracy** potential is available by positioning the transmitter isolation diaphragms within 1/2-inch [13 mm] of the axis of the process taps. The instrument module has also been designed with large bore passages to promote accuracy and improve response time.
- **Modular design** allows the instrument module and transmitter to be easily removed in the field while the block valve module remains in place, facilitating both field service and shop calibration of the transmitter.
- **Designed to be smaller and more compact** than conventional manifolds for ease of installation, calibration, maintenance and accessibility for operation in cabinet systems.
- **Rated to 6000 psig [414 barg]** to meet the most demanding pressure applications.
- **Process connections** are available with 1/2-inch FNPT as standard or with an instrument flange connection for mounting with close-couple or stabilized futbols.
- **Transmitter venting** is accomplished by the use of standard vent plugs or with 1/4-inch NPT controlled vent outlets to allow capture of environmentally sensitive process fluids.

Natural Gas Manifolds – M6A, M6T, M6TA 5-Valve Manifolds

Product Overview

The M6A Five-Valve Manifold for natural gas applications was first designed and manufactured in 1960. It soon took over as the standard for recording orifice meters. Today, it is still widely used. The M6A is usually supported in the vertical meter tubing from the orifice flange union. Static pressure and calibration test connections are standard. The unit is available with integral tube fittings, if desired.

Differential pressure transmitter accuracy and stability have improved, resulting in their broader use for natural gas measurement in production and transmission applications.

To meet the requirements for differential pressure transmitter applications, the M6T (pipe x flange) and M6TA (flange x flange) were designed to provide the family of M6A, M6T, M6TA for various field applications.

Recent natural gas measurement field research has shown that better accuracy results when the transmitter is installed directly on the orifice flanges or orifice fitting. Anderson Greenwood has designed a family of manifolds and installation configurations to meet the more accurate installations and users' requirements.

For direct mount applications, please consult factory.

Features and Benefits

M6A

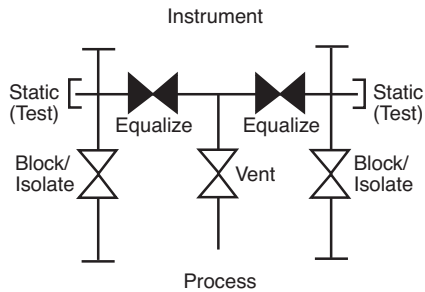

- **Easy Installation.** The lightweight M6A is easily installed in meter tubing. No additional support is generally required.
- **Upstream or downstream 1/4-inch FNPT ports** are standard for connecting the static pressure to the meter.
- **Available with soft or hard seats.** Soft seats are easily replaced in the field in the event of damage from hydrated or sand. Soft seats are tolerant to much abuse from sand, grit, etc. remaining bubble-tight.
- **Bonnet-to-body and stem threads** are isolated from process corrosion – important in sour gas applications.
- **Stem backout prevention** eliminates accidental removal while under pressure.
- **Stem packing** is standard Viton® O-ring with TFE back-up ring with long life assured by mirror finish on stem in the packing area.
- **Integral hard back seat** forms a secondary seal for the stem threads when valve is fully opened.
- **Stem threads** are rolled (not cut) to increase strength and longer life.
- **Either single or double ferrule tube fittings** are available integral to the body. This reduces potential leak points.

M6T and M6TA

- **Same features and benefits as the M6A** plus the following:
- **May be pipe stand mounted** using the appropriate AGCO Mount Kit. This allows the manifold to be mounted prior to receipt of transmitter. Makes it easier and quicker to remove the transmitter for servicing since it is attached only to the manifold and power source.

Natural Gas Manifolds – M6A Specifications

M6A Soft Seat (Metal Seat available) Dimensions, inches [mm]

Metal Seat

Note

- Approximate valve weight: 4.0 lb [1.8 kg].
Metal seat:
0.156-inch [4.0 mm] diameter orifice.
Valve C_v 0.36 maximum.
Soft seat:
0.187-inch [4.8 mm] diameter orifice.
Valve C_v 0.83 maximum.

Natural Gas Manifolds – M6T Specifications

M6T Soft Seat (Metal Seat available) Dimensions, inches [mm]

M6T and M6TA Metal Seat

Notes

- M6T Installation Kit consists of 4 bolts $7/16$ -inch -20 x 1-inch A193-B7, 4 washers, and 2 Teflon® gaskets.
- Approximate valve weight: 6.0 lb [2.7 kg].
Metal seat:
0.156-inch [4.0 mm] diameter orifice.
Valve C_v 0.36 maximum.
Soft seat:
0.187-inch [4.8 mm] diameter orifice.
Valve C_v 0.83 maximum.

Natural Gas Manifolds – M6TA Specifications

M6TA Soft Seat (Metal Seat available) Dimensions, inches [mm]

Notes

- Approximate valve weight: 6.0 lb [2.7 kg].
Metal seat:
0.156-inch [4.0 mm] diameter orifice.
Valve C_v 0.36 maximum.
Soft seat:
0.187-inch [4.8 mm] diameter orifice.
Valve C_v 0.83 maximum.
- M6TA Installation Kit consists of 4 bolts $7/16$ -inch -20 x 1-inch A193-B7, 4 washers, and 2 Teflon® gaskets.
- The M6TA high pressure extrusion has flanged (integral) instrument and process connections.

2. M6A is A108-1018.
3. Available for M6A and M6T only.
4. Available for M6T only.
5. 316 SS bolts lower pressure ratings to a maximum of 4500 psi [310 barg]. Consult factory for full rating with 316 SS bolts.

Natural Gas Manifolds – M63A, M65T and M65A 5-Valve Manifolds

Product Overview

$\frac{3}{8}$ -inch [9.5 mm] Orifice

This product series parallels the M6A series but with the larger $\frac{3}{8}$ -inch [9.5 mm] orifices. The series was developed to answer two needs: 1) a larger valve orifice to assure positive line drainage where wet gas and hydrates are a problem; and 2) to match the flange tap drilling of $\frac{3}{8}$ -inch [9.5 mm] reducing signal variance when pulsating flow is experienced and the manifold (M65A) is mounted as close to the flange outlet as practical.

Features and Benefits

- **The valves are identical** for all three manifold configurations:
M63A - pipe x pipe
M65T - pipe x flange
M65A - flange x flange
- **As with the M6A series**, the M63A is generally mounted and supported by the $\frac{3}{8}$ -inch or $\frac{1}{2}$ -inch tubing lines for orifice meter applications.
- **The M65T and M65A may be pipe stand mounted** with the appropriate AGCO Mount Kit to support a differential transmitter. Advantages of AGCO Mount are: that installation may be made prior to availability of the transmitter; and, easier and faster removal of transmitter for maintenance since transmitter is supported only by the manifold.
- **Soft seats** are available in a variety of materials to suit sweet or sour gas.
- **The seats are field replaceable** without removing the manifold.
- **Bonnet assemblies have blowout-proof stems** that seal and isolate the packing when the valve is fully open.
- **Packing** is below the stem threads for corrosion protection.

Natural Gas Manifolds – M19 Meter Manifold

Product Overview

The M19 Meter Manifold is a three- or five-valve manifold specifically designed for use with orifice meters. It is designed for repetitive bubble-tight closure, safety, and a long trouble-free life with easy maintenance. Field replaceable soft seats give premium tightness at closure, even in dirty service. The straight-thru rising plug design provides good regulation and is roddable for easy cleaning.

The five-valve assembly is indicated for orifice meters remote from the orifice flange union.

The three-valve manifold is used when the orifice meter is mounted adjacent to the orifice flange and the two process block valves provide convenient closure.

Features and Benefits

- **The M19 was designed** to overcome the leaking problems experienced with inexpensive valves and 1/4-inch pipe-fitting assemblies made-up under varying conditions.
- **Replaceable soft seats** allow replacement of the seat insert without removing the valve from the line. Operates in dirty service with repetitive bubble-tight shutoff.
- **Adjustable Teflon® packing** is easily changed by loosening the jam nut, tightening the bushing slightly, then retightening the jam nut. This feature reduces downtime in packing replacement, and provides for long valve life.
- **The O-ring packed design** for natural gas is self-adjusting.
- **Packing below threads** prevents lubricant washout, thread corrosion, and keeps solids from entering thread area causing galling. This also prevents process contamination.
- **Mirror stem finish** is burnished to a 16 RMS finish in the packing area. This ensures smooth operation and increases the life of the packing.
- **Straight-thru flow path.** High flow capacity and rodding capabilities.
- **Body-to-bonnet seal.** The seal is metal-to-metal in constant compression below the bonnet threads. This prevents bonnet thread corrosion, eliminates possible tensile breakage of bonnet, and gives a reliable seal point.
- **Rolled threads.** Stem and male NPT threads are rolled rather than cut, giving extra thread strength.
- **Chrome plating of 316 SS stem.** Hard chrome plating of stem threads prevents galling or freeze-up, which may occur when similar metals mate. CS valves are supplied with SS stems.
- **Safety back seating** prevents stem blowout or accidental removal while in operation.
- **Dust cover** protects stem from lubricant contamination.

Distribution Manifolds – ADME

Product Overview

Designed to distribute air for panel and cabinet instrumentation. Can easily be wall or pipe stand mounted.

The ADME is manufactured from an extruded section in either CS or SS and is available with either ball valves or H5-type miniature needle valves with soft or hard seats. These valves are suitable for pressures to 725 psig [50 barg], 3000 psig [207 barg] and 6000 psig [414 barg].

The ADME manifold body has $\frac{3}{4}$ -inch NPT end connections and $\frac{1}{4}$ -inch NPT side outlets. The manifold inlet can be supplied flanged in sizes up to 1-inch NB class 2500 lb. The manifold end outlet is fitted with a $\frac{3}{4}$ -inch NPT adaptor and drain valve as standard. Available from 2 x 2 to 2 x 10 outlets, the standard manifolds have equally spaced outlets on both sides of the body; the outlet ports may be positioned to meet specific requirements.

Features and Benefits

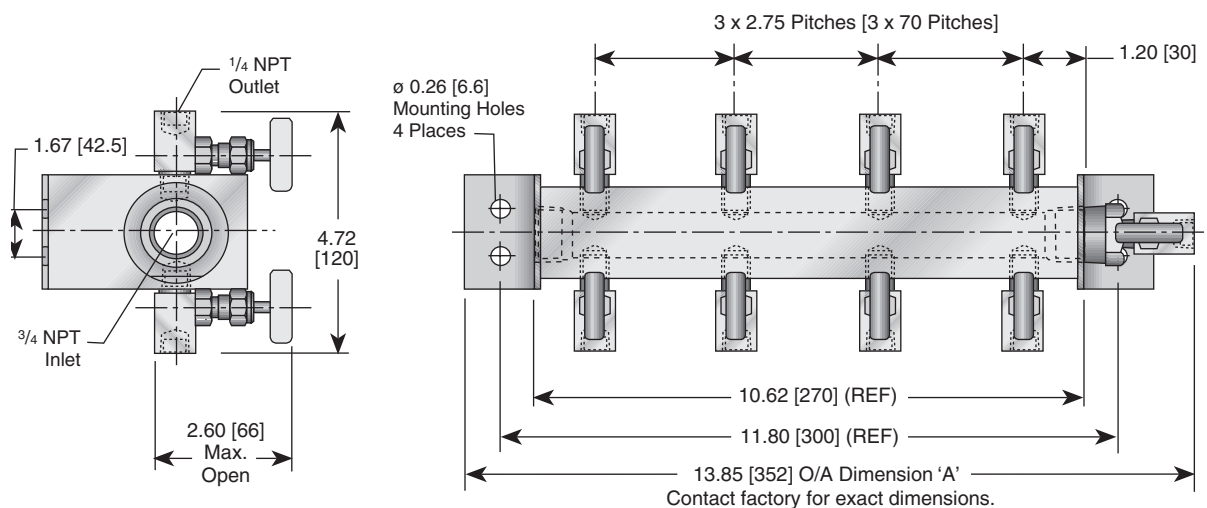

- **Compact design** enables lower installation costs and fewer potential leak points.
- **Choice of body materials** suitable for a range of process applications.
- **Choice of valve types;** ball valves or miniature needle valves with soft or hard seats can be specified.
- **Secure mounting** suitable for panels, walls and 2-inch [50 mm] NB pipe stand.
- **Threaded or flanged inlet** available with $\frac{3}{4}$ -inch threaded or flanged inlet, in sizes up to 1-inch NB class 2500 lb.

Distribution Manifolds – ADME Specifications

ADME.8.S.BVS-22 Dimensions, inches [mm] – Ball Valve Type

ADME.8.S.H5VIS-22 Dimensions, inches [mm] – Needle Valve Type

Overall Dimensions – inches [mm]

Number of Outlets	4 (2 x 2)	6 (2 x 3)	8 (2 x 4)	10 (2 x 5)	12 (2 x 6)	14 (2 x 7)	16 (2 x 8)	18 (2 x 9)	20 (2 x 10)
A (H5 Valves)	8.35 [212]	11.10 [282]	13.85 [352]	16.61 [422]	19.37 [492]	22.12 [562]	24.88 [632]	27.64 [702]	30.39 [772]
B (Ball Valves)	10.31 [262]	13.07 [332]	15.82 [402]	18.58 [472]	21.38 [542]	24.09 [612]	26.85 [682]	29.60 [752]	32.36 [822]

Manifold Accessories

Bonnet Lock (BL) (Patented)

- Anderson Greenwood's Bonnet Lock prevents accidental loosening of the bonnet-to-body seal.
- A high-strength, short bonnet pin aligns a hex collar over the bonnet. A standard panel nut (GRAFOIL® packed) then locks the collar against the valve.
- Tests indicate the minimum torque required to break the collar loose is greater than the torque required to twist off handle.
- Available on GRAFOIL® packed bonnets.

GRAFOIL® Packed Bonnet Lock¹

Note

1. Standard on power plant manifolds.

Seat Resurfacing Tool

Over time the seating surface of the body orifice may corrode or be damaged. The seat resurfacing tool will re-machine this surface and allow the valve to once again deliver bubble-tight shutoff. Available for H7 style, metal seated valves only.

Model Number/ Part Number	Description
SRT-1 02.2543.001	Seat Resurfacing Tool for $\frac{3}{16}$ -inch [4.8 mm] diameter orifice, H7 style metal seated valves

Manifold Accessories

Rod-Out Device

The Rod-Out is a device to rod-through passages that have become restricted. It is designed to be used while the valve is not under pressure. It can be left in place while the valve is under pressure. The centerless ground rod has a hardened cutting end larger than the shaft to prevent 'blowout' through the adjustable packing gland. The Rod-Out is available with a 3/16-inch [4.8 mm] or 3/8-inch [9.5 mm] diameter rod.

Dimensions, inches [mm]

Rod-Out Device with M5AK Gauge Valve

Notes

- Maximum recommended usage:
500 psig @ 100°F [34 barg @ 38°C].
100 psig @ 500°F [7 barg @ 260°C].
- Rod tip for 3/8-inch [9.5 mm] bore is
0.312-inch [7.9 mm] diameter.
Rod tip for 3/16-inch [4.8 mm] bore is
0.141-inch [3.6 mm] diameter.
- For special rod lengths, materials or
connections, consult factory.
- Teflon® packing.
- 2-bolt flanged connection is available.
- 3/8-inch [9.5 mm] diameter device is
1.0 lb [0.45 kg] each.
3/16-inch [4.8 mm] diameter device is
0.5 lb [0.23 kg] each.
- CS is zinc cobalt plated to resist corrosion.

Code Requirements

ASME B31.1 or B31.3

Valve design criteria is described in Section 107. Important considerations from this section are as follows:

1. Valves require specific pressure and temperature ratings such as those found in ASME B16.34.
2. Material requirements must conform to listed ASTM specifications.
3. As a minimum, the valve body should be marked or tagged in accordance with specification MSS SP-25.
4. Valve design may include screwed, union, or OS&Y bonnets.

The requirements for instrument, control, and sampling systems are found in Section 122. Instrument piping, as defined by this section, includes that piping from the instrument root valve (or first valve off the main piping line) up to, but not including, the instrument, transmitter, or any other measuring and sensing device.

The instrument valve or manifold must be designed to withstand full system design pressure at the design temperature or the corresponding saturation temperature if the service is steam. Even though the instrument will never be subjected to the system temperature, manifold design requires this protection in the event that the root valve should fail under operating

conditions. If blowdown valves are used between the root valve and the manifold, then the manifold design temperature rating need only be 100°F [38°C]. However, in such cases, the pressure rating must be the lesser of 1.5 times the mainline design pressure or the rating of the blowdown valve. The utilization of commercial grade manifolds (without the manufacturer's certification to ASME B31.1 or if stamped WOG) which meet only the pressure ratings are prohibited unless all other code requirements have been met (such as Table 126.1 of ASME B31.1 for materials, compliance to testing requirements, etc).

The final section of the Code, Section I, 137, specifies the criteria for testing. All instrument manifold valves are required to be hydrostatically tested by the manufacturer to certify compliance with the Code. Hydrostatic testing is performed, as a minimum, in accordance with MSS SP-61. This testing includes the body cavity hydrostatic test at 1.5 times the design pressure rating and seat leakage test(s) at 1.1 times the maximum pressure rating.

In Table 126.1 of ASME B31.1 and in Appendix E of ASME B31.3, Instrument Valves and Manifolds qualified to MSS SP-105 are acceptable within the specified pressure/temperature rating
